

Feeder-only lipid changes relative to DMEM

Contextual reference only; not the primary biological contrast

Feeder-background-adjusted BMC effect across lipid classes

Primary contrast: $\log_2[(\text{BMC} + \text{adipocytes})/\text{adipocytes}] - \log_2[(\text{BMC} + 3\text{T3-L1})/\text{adipocytes}]$

Directional patterns among manuscript-prioritized lipid classes
